

Greetings -- I support dedicated sub-bands within the 1.8-->2.0MHz band for narrowband modes like CW and PSK-31. This action will settle the squabbles between SSB and CW operators. The so-called gentlemen's agreements seem to be failing as the population of technically-able Amateur operators has been diluted by what appears to me as a large population of "appliance operators" (low or no technical abilities) whose only interest is to talk with someone.

Sincerely,

w7wkr - John R Bingham
